

Shift Track

1. Use Shift Track to compensate for Satellite drift
2. On Run Page 3 use the number 1 button to shift to the left 1/10 of a foot, use the number 3 button to shift to the right 1/10 of a foot, or use the number 2 button to center the line.
3. If you use shift, you not only shift the line you are on, you also shift all other lines in the field. So don't expect to go back to another line and be lined up correctly.
4. Mainly used when the vehicle has sat for an hour or so and you are ready to start again. If you were physically lined up with your next pass, and the display shows an error.

TCM Calibration

1. Calibrate when experiencing Wide/Narrow Guess Rows
2. Press "Setup"
3. Press button next to Starfire iTC
4. Press "C" TCM Setup
5. Press "B" Calibrate Level
